To Place an order:

Order and Product Inquiries can be made through Southmedic's Customer Service Department.

705-720-1902
1-800-463-7146

(Press 1 for Customer Service)

Fax: 705-728-9537
custserv@southmedic.com

Returns:

All requests for return of products must be authorized by Southmedic's Customer Service Department prior to returning goods.

No product will be accepted for return after 30 business days of delivery to your location. A restocking fee may apply.

Care and Maintenance of Cleaning Brushes:

1. Select appropriate sized brush for instrument being manually cleaned:

2. Completely submerge immersible item to minimize aerosolization of microorganisms and assist in cleaning:

4. Reusable brushes will be mechanically cleaned by ultrasonic and/or mechanical washers including a disinfection cycle each day.

3. Inspect brushes for damage after each use and discard if necessary.

5. Brushes shall be dry and stored in a clean location between uses.

Remember:

- ** Brushes only assist in the cleaning process.**
- ** Brushes should only be used in the decontamination area.**
- ** Brushes should never be used ON or IN the human body.**

The Anatomy of Southmedic Instrument Cleaning Brushes

Color Coded Beads

- Easy identification
- Makes reordering easy

Stainless Steel Twisted Wire

- Resists rust
- Reusable
- Durable

Anti-Microbial Bristles*

- Resists bacterial growth
- Extends the life of the cleaning brush

Brush Rack

- Brush rack keeps brushes organized
- Brushes are color-coded for easy identification and reordering
- Rack allows brushes to dry while hanging

Brush rack sold separately from kit: Order # 5631

Cleaning Brush Scale

Available from Southmedic

Order # 45-0003

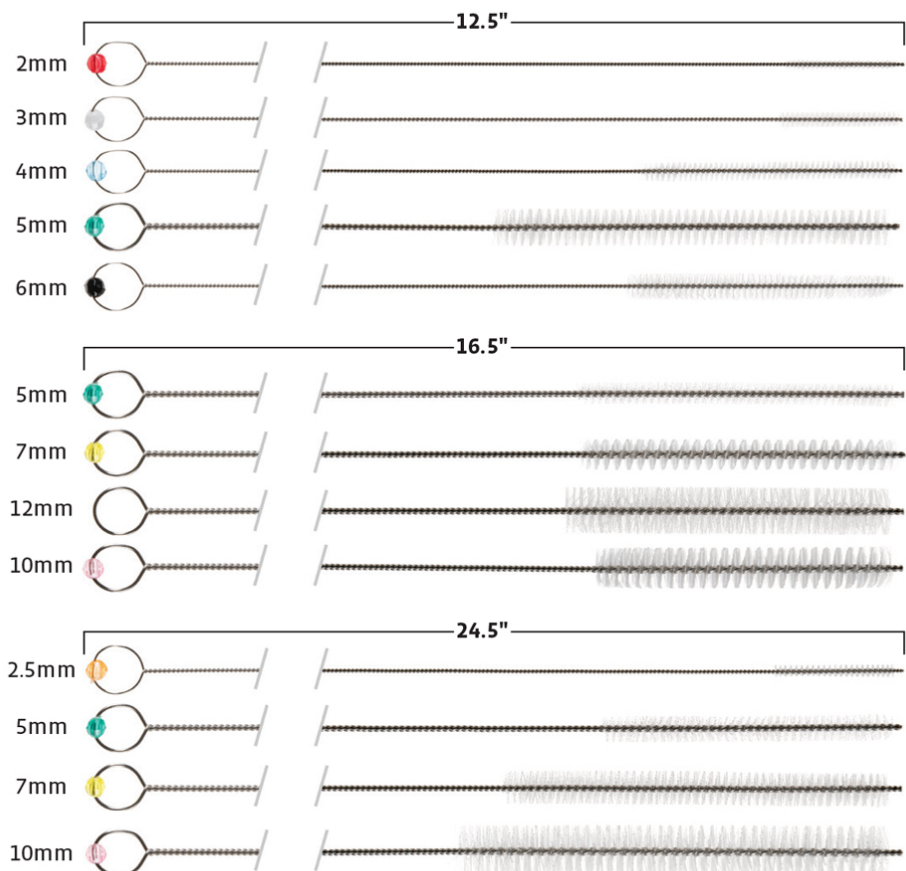

- Anti-Bacterial*, Nylon-Bristled, Twisted Wire Cleaning Brushes
- Color-Coded Cleaning Brushes

- Perfect for cannulated or lumened instruments of various lengths and diameters
- Made with anti-bacterial* nylon bristles and stainless steel twisted wire shafts
- Color-coded for easy identification
- 3 per package

*Bristles contain an agent that inhibits growth of bacteria on the surface of the bristle

Our In-Brush™ Antimicrobial Reusable Twisted Wire Brushes are designed for use with Frazier/Baron suction tubes. The twisted wires have a fine/medium diameter yet are rigid enough to ensure excellent cleaning capabilities.

Our wide assortment of Nylon Twisted Wire Brushes are ideal for large bore, uniquely shaped, and endoscopic instruments.

GOOD TO KNOW: OUR TWISTED WIRE BRUSHES FEATURE A PROTECTIVE BLUE TIP FOR ADDED SAFETY.

INSTRUMENT CLEANING FLAT BRUSHES

Our Instrument Cleaning Flat Brushes are specifically designed for hospital use in the pre-clean and preparation of instruments.

- Long ergonomic handle permits ease-of-use
- Extra long length of brush head (60 [±5] mm in Single-Use and 75 [±5] mm in Reusable)
- Transparent brush fibers allow for quick verification of its cleanliness
- The plastic handle will not release any toxic components
- Available in 6 models (4 reusable/autoclavable and 2 single-use)

FLEXIBLE

This brush is designed for large instruments that require a more gentle cleaning application such as optics, plastics, or hard to reach spot.

50-40919

50-40922

EXTRA FLEXIBLE

The very long, flexible bristles eliminate any stress during sanitation, and makes this the ideal brush for fragile instruments as well as both pliable and rigid endoscopes. The length of the bristles assist in cleaning areas that would otherwise be difficult to reach, such as the accessory channel or tip deflection of pliable endoscopes.

50-40920

RIGID

The rigidity of this brush, along with the length of the bristles and handle, improves and simplifies instrument cleaning.

50-40918

EXTRA RIGID

Instrument safe polyamide fibers offer steel-like rigidity and allows deep cleaning of soiled instruments, particularly in grooved or uneven surfaces.

50-40917

50-40921

Remember:

- 1) Brushes only assist in the cleaning process.
- 2) Brushes should only be used in decontamination.

■ The Facts about Southmedic's Stainless Steel Instrument Cleaning Brushes

It has been reported for years that the use of stainless steel cleaning brushes will damage an instrument's surface or passivation layer. To dispel this myth, we hired an independent testing lab to test instruments before and after brushing with a Southmedic stainless steel, bristled instrument cleaning brush (order # 45-303SS). The test employed before and after photos, taken with an electron microscope at 200X magnification. In addition, we examined the metallurgical properties of the stainless steel before and after brushing. During the test, the instrument's surface was brushed 60 times. As you can see from the photos below, the stainless steel bristles did no harm to the instrument's surface, proving that using Southmedic's stainless steel-bristled cleaning brushes WILL NOT HARM your stainless steel surgical instruments. For complete details or a copy of the test, please contact a Southmedic Customer Service Representative at 705-720-1902 or 1-800-463-7146.

Test: Metallurgical Laboratory Study
Date: Analysis conducted 2003

Protect Delicate Instruments During Sterilization

- Pebbled surface of tray raises mat for proper sterilization and prevents mat from sticking
- Sterilizable by all standard methods of sterilization (autoclave, steam, dry heat, chemical)
- Trays are molded from medical-grade resin
- Integrated feet in bases and corner ridges on covers allow secure stacking
- Additional mats and bars are available online

- Perfect for retractors, specula's, bowls, basins, hoses, sinks
- 11" solid blue plastic handle
- White, medical-grade nylon bristles
- 3 per package

Order # PK694B

Hand & Nail Cleaning Brush

- Can be used to clean instruments and equipment a
- Easy-grip plastic handle
- White, medical-grade nylon bristles
- 3 per package

Order # BR105608

Premium Endoscope Channel Cleaning Brushes

The Assurance of 5 Cleaning Actions

Scientifically proven improvement over existing brush technology*

“They clean what others leave behind”

The PULL THRU™ is a Revolutionary Single Use Endoscope Cleaning Device.

The PULL THRU™ range of patented endoscope channel cleaning brushes can be effectively used to clean endoscope channels from 1.0 to 8.0mm with a single pass.

These cleaning brushes are designed to significantly reduce the time required to manually clean endoscope channels and to improve the overall efficacy of the cleaning process.

The PULL THRU™, range is disposable/single use which removes the need for the complicated, expensive cleaning and sterilization procedures used for traditional brushes.

The unique patented wiper element design provides a complete circumferential seal in the endoscope channel with a piston like action thereby removing almost all residue in a single pass.

Scientifically proven, the PULL THRU™' single pass operation significantly improves the efficiency of the cleaning process when compared to traditional bristle brushes.

Because the wipers are made out of a soft plastic, non abrasive material, they will not harm the endoscope channel walls.

Summary of Scientific Papers*

University Hospitals Birmingham 2012 NHS Foundation Trust

The Birmingham study compared the performance of a PULL THRU™ Cleaning Brush after one pass through a pre-contaminated channel, with a bristle brush after five passes. Performance was assessed using a Ninhydrin test to measure detectable protein, and a visual inspection was made to detect soil.

The results indicate that a single pass of the PULL THRU™ product is as effective as five passes of the bristle brush.

2011

The Deventer study compared protein removal in the channel of a range of colonoscopes after brushing with a reusable bristle brush, a single use bristle brush and a PULL THRU™ Cleaning Brush.

Each brush was passed down the channel of the colonoscope once when the scope was manually cleaned. The protein loading in the channels was measured prior and subsequent to cleaning.

Conclusions: The PULL THRU™ removes 18% more atp (organic material) than brushing with a single use bristle brush. The PULL THRU™ removes 30% more material than reusable brushes.

Summary of Scientific Papers

Aseptium  October 2021

The aim of the study was to compare and evaluate the cleaning efficacy of the PullThru wipes against alternative cleaning devices (single-headed brush and double-headed brush) through using VeriTest Blue protein detection reagent and ProReveal protein quantification technology.

Summary:

This study aimed to determine the most effective cleaning device among three different types of brush. The results indicate that the PullThru device is the most effective of the three at removing contamination from the internal channels of endoscopes, demonstrating a 93% greater efficacy than the Single Headed Brush and a 79% greater efficacy than the Double Headed Brush.

Figure 9. Comparison of Cleaning Efficacy between groups.

Rescope  September 2021

The purpose of these tests was to investigate whether:

- The PULL THRU™ Cleaning Brush damages the biopsy channel during manual brushing.
- If there is existing damage, such as a kink in the channel, what impact does this have on the cleaning performance of the PULL THRU™ Cleaning Brush.

Conclusions:

No damage was observed in the biopsy channel when using the PULL THRU™ Cleaning Brush. The PULL THRU™ Cleaning Brush is more effective than the regular bristle in cleaning the channel around a kink in the channel.

The conclusion is that the PULL THRU Cleaning Brush is more effective than the regular brush both in undamaged biopsy channels and channels with a kink.

The PULL THRU™ Cleaning Brush in the biopsy channel

A regular bristle brush in the biopsy channel

Summary of Scientific Papers

University Hospitals Birmingham (2012 03)
NHS Foundation Trust

The Birmingham study compared the performance of a PULL THRU™ Cleaning Brush after one pass through a pre-contaminated channel, with a bristle brush after five passes. Performance was assessed using a Ninhydrin test to measure detectable protein, and a visual inspection was made to detect soil.

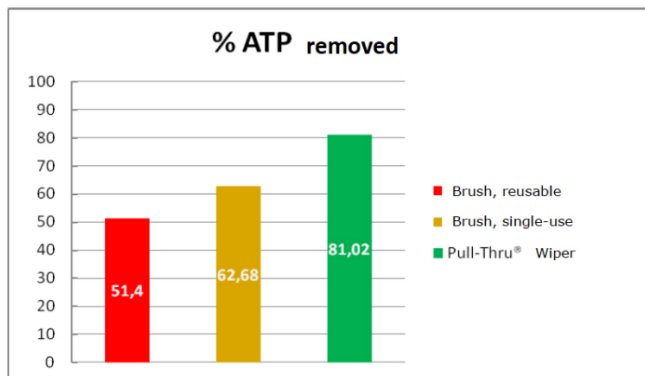

The results indicate that a single pass of the PULL THRU™ product is as effective as five passes of the bristle brush, even after the soil was left to dry for 30 minutes.

Test	Pull Thru Device			Cleaning Brush		
	Number of passes	Visual Inspection	Ninhydrin test	Number of passes	Visual Inspection	Ninhydrin test
1	1	No soil	Negative	>5	Scanty soil	Negative
2	1	No soil	Negative	>5	Scanty soil	Negative
3	1	No soil	Negative	>5	Scanty soil	Negative
4	1	No soil	Negative	>5	Scanty soil	Negative
5	1	No soil	Negative	>5	Scanty soil	Negative
6	1	No soil	Negative	>5	Scanty soil	Negative
7	1	No soil	Negative	>5	Scanty soil	Negative
8	1	No soil	Negative	>5	Scanty soil	Negative
9	1	No soil	Negative	>5	Scanty soil	Negative
10	1	No soil	Negative	>5	Scanty soil	Negative

 Deventer Study (2011 11)

The Deventer study compared protein removal in the channel of a range of colonoscopes after brushing with a reusable bristle brush, a single use bristle brush and a PULL THRU Cleaning Brush.

Each brush was passed down the channel of the colonoscope once when the scope was manually cleaned. The protein loading in the channels was measured prior to and after cleaning-

Charlton Study, Australian Infection Control 2007; 12(3); 81-90 (2007).

The Charlton study measured the weight of pre-loaded soil removed after a single pass of the PULL THRU Cleaning Brush versus six passes of the bristle brushes used in the comparison. The PULL THRU Cleaning Brush removed at least 96% of debris every time, whereas the bristle brushes removed between 29% and 90% of debris.

Figure 3. Percent of soil removed (Mean ± SD) from the lumen after passage of the lumen-cleaning device.: A. 2.8 mm (new) lumen, B. 2.8 mm (old) lumen, C. 5.0 mm (old) lumen.

Summary of Scientific Papers

Alfa, Michelle & M. Ribeiro, Maira & da Costa Luciano, Cristiana & França, Rodrigo & Olson, Nancy & Degagne, Pat & Singh, Harminder. (2017). A novel polytetrafluoroethylene-channel model, which simulates low levels of culturable bacteria in build-up biofilm after repeated endoscope reprocessing. *Gastrointestinal Endoscopy*. 86. 10.1016/j.gie.2017.05.014.

In this study, the authors reprocessed endoscopes each day for five days, storing them wet overnight to facilitate biofilm growth. Two types of detergents and cleaning brushes were used to see which would give the best results in the manual cleaning process. For both detergents used, the PULL THRU Cleaning Brush gave better results overall in each category, apart from the mean ATP when used with an enzymatic.

The Authors note on page 1289:

“Our data also support the role of friction in the cleaning process because the use of the pull-through channel cleaner left less organic debris than the bristle brush, when evaluated by SEM. The flexible “discs” of the pull-through device would have better surface contact with the inner surface of the PTFE channel compared to the bristles of the traditional bristle brush used for cleaning. This may explain why the SEM images showed far less residual debris and bacterial forms when the pull-through device was used, regardless of the detergent.”

Alfa, Michelle & Singh, Harminder & Nugent, Zoann & Duerksen, Donald & Schultz, Gale & Reidy, Carol & DeGagne, Patricia & Olson, Nancy. (2017). Sterile Reverse Osmosis Water Combined with Friction Are Optimal for Channel and Lever Cavity Sample Collection of Flexible Duodenoscopes. *Frontiers in Medicine*. 4. 10.3389/fmed.2017.00191.

This study investigated the sampling of duodenoscope channels. Though not directly related to the cleaning capabilities of the PULL THRU Cleaning Brush, the study provided some interesting findings.

On page four of the study it states

“The pull-through channel cleaner was the most effective at removing fixed residuals in the borescope examination.”

And on page seven

“In addition, the borescope assessment supports the initial data reported by Alfa and Olson (13) confirming that the use of friction (i.e., bristle brush or pull-through device) for sample collection of the channel is critical to ensure optimal removal of fixed residuals --regardless of what fluid is used or sample extraction”.

Cattoir, Lien & Vanzieleghem, Thomas & Florin, Lisa & Helleputte, Tania & de vos, martine & Verhasselt, Bruno & Boelens, Jerina & Leroux-Roels, Isabel. (2017). Surveillance of Endoscopes: Comparison of Different Sampling Techniques. *Infection Control & Hospital Epidemiology*. 38. 1-8. 10.1017/ice.2017.115.

This study also explored sampling techniques.

On page four, the study notes,

“Based on our findings, it could be argued to replace standard cleaning brushes with PULL THRU Brushes for manual endoscope cleaning. Because current evidence is limited, future research on the efficacies of different brush types for manual cleaning of flexible endoscopes is warranted.”

The Assurance of 5 Cleaning Actions

“Feel the Clean”

- Improving the efficacy of the mechanical clean, the 360 degree circumferential seal allows the PULL THRU™ to improve the efficacy of the mechanical clean, the 360 degree circumferential seal allows the PULL THRU™ to remove at least 96% of the debris (Note1)

- This flushing action helps remove remaining debris from scratches in the channel

- Enhances the efficacy of the detergent soak that is used in the sink to manually clean the scopes by creating a uniform film for the detergent to attack in a more effective manner

- The PULL THRU™ imposes a uniform action for cleaning the channels, reducing cleaning variation and improving infection control

- A uniform cleaning action = Reduction in deviations in cleaning protocols (Note 2)

- Ensures there is detergent in the channel to attack any remaining film

(Note 1)

Timothy S Charlton. A comparison of the efficacy of lumen - cleaning devices for flexible gastrointestinal endoscopes. Aust Infect Control 2007; 12(3): 81-90

(Note 2)

“...minor deviations from cleaning protocols resulted in persistent microbiological contamination after disinfection”
Deva et al. Detection of persistent vegetative bacteria and amplified viral nucleic acid from in-use testing of gastro-intestinal endoscopes. J Hosp Inf 1998;39:1 49-157

Note: The Endoscope channel must be brushed until clean.

Dri-Scope Aid® Jet-Stream

(Series 1840P pictured above)

Dri-Scope Aid® Jet~Stream is designed to assist in the drying of the internal channels of an endoscope. The internal channels are an ideal environment for colonization of bacteria. It is for this reason, SGNA, AAMI, AORN and scope manufacturers all state that the internal channels of an endoscope should be purged with air until dry.

- Constant Flow
- Consistent Pressure
- Repeatable Results

Dri-Scope Aid® Jet~Stream provides a constant flow of 0.1µm HEPA-filtered air to aid in completing the drying process after high-level disinfection. Dri-Scope Aid® Jet~Stream was designed for ease of operation. The dual timer on the Dri-Scope Aid® Jet~Stream increases efficiency by allowing two scopes to be connected individually with separate timers. The scopes are connected with daily tubing and individual scope connectors.

Features & Benefits

- Significantly improves drying of internal channels
- HEPA-filter offers a 99.97% retention rate of particles that have a size >0.1µm
- Now with 80% more air flow than our previous models
- Provides constant air delivery through all internal endoscope channels
- Low airflow warning
- Automatic high pressure shutoff protection
- Also available for use with Medical/Instrument Air (Series 1840R)
- Hands-free operation
- Visual displays of purging times
- Suitable for counter top placement, pole or wall mounting
- Audible and visual alerts upon completion
- Simple to attach daily tubing
- Disposable scope connectors for major endoscope brands
- Filter replacement indicator light
- Automatic shut-off valve if one port is not being used

JET-CART

- Dry up to two scopes at once
- Holds up to six trays
- Scope hangers for up to four scopes
- Jet~Stream connector storage system
- Fold out 2nd shelf
- Dimensions: 37.25" H x 20.5" W x 24.375"D

Dri-Scope Aid Cabinet

Convert your existing scope cabinet into an automatic scope drying system

Drying the endoscopes after every reprocessing cycle, both between patient procedures and before storage, is a requisite practice crucial to the prevention of bacterial transmission and nosocomial infections as cleaning and HLD (Kovaleva et al., 2013; Muscarella, 2006).

- **Constant Flow**
- **Consistent Pressure**
- **Repeatable Results**

The Dri-Scope Aid® Cabinet supplies HEPA-filtered air to all internal channels to aid in drying endoscopes with an auto- mated drying cycle for improved turn-around time , and a continuous venting cycle for overnight storage. The Dri-Scope Aid® Cabinet converts your scope cabinet into a complete drying system.

Features & Benefits

- Significantly improves drying of internal channels
- HEPA filter offers a 99.97% retention rate of particles that have a size > 0.3µm
- Provides constant air delivery through all internal endoscope channels
- Short drying cycle for quick turn-around time
- Continuous venting cycle for overnight storage
- Automatic high-pressure shutoff
- Fulfills forced air recommendations
- Self-adjusting high-pressure regulation

Ease of operation

- Hands-free operation
- Visual display of purging times
- Fits most existing scope cabinets
- Simple to attach individual scope connectors
- Works with major endoscope brands
- Filter replacement indicator light
- Dries 1-16 endoscopes

Modernize your endoscope cabinet with a

Dri-Scope Aid[®] Cabinet

drying system

Pictured here is an endoscope storage cabinet outfitted with our 33 Series 8 port automated drying system.

■ Instrument Care Solutions

Power-Lube®

Spray-on instrument lubricant with rust inhibitor

- Puts lubrication where you need it
- Neutral pH
- Contains a rust inhibitor
- 32 oz spray bottle - Fast, easy application
- Prolongs the life of instruments

Order # SS-21-6032 (1 x 32 oz. spray bottle)

Order # SS-21-6012 (12 x 32 oz. spray bottles)

Spectra-Clave®

All purpose sterilizer/autoclave cleaner

- Helps reduce deposits and stains on the inside of the chamber
- Assists sterilizer in operating more efficiently
- 32 oz spray bottle - Fast, easy application

Order # SS4

Spectra-Scrub®

Powdered stain remover for stainless steel instruments

- Easy to use - Citric base, no fumes
- Removes tough stains - Non-abrasive
- 8 oz. container

Order # SS7-1

CASE Solutions® Penta Wipes Cleaning Wipes

CASE Solutions® Penta Wipes are premoistened, non-woven, disposable surface cleaning wipes. Each single-use wipe is impregnated with U.S. EPA Safer Choice awarded PentaZyme® solution, a biodegradable, free-rinsing, multi-enzymatic cleaning solution. Penta Wipes are compatible with all medical devices and designed to be used for cleaning rigid and flexible endoscopes, numerous other medical devices, and environmental surfaces. Penta Wipes are compatible with the following materials: metals (such as anodized aluminum and stainless steel), plastic, silicone, glass, and rubber.

Order # CSWE002

Instrument Care Solutions

ET Foam™

Enzymatic Soaking Foam

- South Medifoam is an enzymatic instrument pre-cleaner and transportation foam. South Medifoam with a neutral pH, is a non-corrosive pre-cleaner that effectively dissolves blood, tis-sue, and other soils. South Medifoam prevents blood from drying on instrument surfaces and sustains moisture. It effectively cleans away organic matter from surgical instruments. It coats instrument surfaces, penetrates cracks, crevices and lock boxes loosening and dissolving proteinaceous deposits.
- The deposit on the instruments will remain moist for up to 48 hours (dependent on temperature and humidity) leaving no sticky deposit or residue.
- Perfect for use in surgery, central processing and any department where instrument cleaning is not immediately available.
- Simply spray the ready-to-use solution directly onto soiled instruments. The thick foam allows the user to visually ensure that all instruments are sprayed and covered.

Order # Medifoam-1 1 liter

Medimilk SF

Concentrated Instrument Lubricant and Rust Inhibitor

Clinically tested to be thoroughly steam penetrable and sterilizable!

MEDIMILK is clinically proven to keep instruments in top condition. Routine use reduces the incidence of rust, spots, stains and corrosion on surgical instruments, thereby prolonging the life of the instruments.

- Bacteriostatic
- Effective in steam, dry or chemical vapour sterilizers
- Prevents spotting, staining and instrument rust
- Routine use reduces cost of instrument repair & replacement
- Super concentrated-1 part to 5 parts water
- Will not interfere with the microbial killing efficacy of autoclaving
- Water-based - environmentally friendly!

Order # GERM/Medimilk-SF-4

FastFoam™

Point-of-Use Presoak Foam Spray System

- For Instrument Tray or Instrument Channels
- 10X more foam volume for better coverage of soiled instruments
- Fast coverage and longer lasting foam for soiled instruments in the tray
- Channel irrigation wand for lumen instruments
- Automated spray eliminates manual hand pumping associated with trigger sprayers
- Durable, lightweight foam applicator wand
- Adjustable wet/dry foam quality • Shortens manual cleaning effort • Simple & easy application

Moisture Retention Pouches for Post-Operative Instrument Handling

Shorten your pre-washing time up to 70% and save money. Westfield Medical's patented Humipak helps to increase efficiency on reprocessing used instruments and offers a convenient and reliable way to comply with the requirements of HTM 01-01 and WHTM 01-01 with regard to the need to ensure a continuously moist environment for instruments between use and reprocessing.

- Not intended for sterilization or washing
- Available in blue and five self-seal sizes
- Manufactured under ISO 9001 and ISO 13485 Quality Systems
- 5 sizes suitable for Half-DIN, DIN and Double-DIN baskets, smallest size for smaller instruments and size 560x670 specifically designed for Endoscopes
- Patents granted No: US13/643,069, AUS2011244793, ZL2011 8 0031188.0
Patent applied No: EU11723584.6
- To meet the requirements of HTM01-01, SHTM01-01 and WHTM 01-01

Product Code	Description	Size (mm)	Pack Quantity
HPSS2035	Small Tray	200 x 350	100

HPSS5667	Endoscopes	560 x 670	100
HPSS6577	Double DIN	650 x 770	50

Peel+ Sterilization Pouches

Premium quality lat and gusseted pouches

This Peel+ Pouch uses stronger base materials to give improved puncture resistance, shatterless film and an excellent fibre-free peelability characteristic.

Comprising of a multi-layer film and 70gsm paper this provides an exceptional clean peel and improved seal strength

Features:

- A multi layer heat sealable 12/40 PET/PP film
- Available in a range of sizes to suit your requirements
- Chevron shaped end with thumbholes for ease of opening
- 3 sided sealed with a ribbed pattern to 70gsm medical grade paper
- Suitable for steam and EO sterilization and printed with class 1 process indicators
- Clear change of indicators makes it easy to distinguish between processed and unprocessed products

Benefits include:

- Minimising the risk of contamination from fibres into the atmosphere and on the device itself with cleaner peel characteristics
- The ability to present the product aseptically with a fibre free peel
- Improved puncture resistance with the use of stronger paper than Westfield’s standard products
- All indicators and text prints are within the seals avoiding the risk of ink contamination onto the device.

These pouches are produced in a class 8 cleanroom and are manufactured under ISO 9001/ISO 13485 Quality System, CE and BSI Kite Mark.

Peel+ Sterilization Reels

Flat and Gusseted premium quality sterilization reels

Best in class peel quality

This Peel+ Reel uses stronger base materials to give improved puncture resistance, shatterless film and an excellent fibre-free peelability characteristic.

Comprising of a multi-layer film and 70gsm paper this provides an exceptional clean peel and improved seal strength.

Features:

- A multi layer heat sealable 12/40 PET/PP film
- Available in a range of sizes to suit your requirements
- 2 sided sealed with a ribbed pattern to 70gsm medical grade paper
- Suitable for Steam, EO and Formaldehyde sterilization and printed with class 1 process indicators
- Clear change of indicators makes it easy to distinguish between processed and unprocessed products

Benefits include:

- Minimising the risk of contamination from fibres into the atmosphere and on the device itself with cleaner peel characteristics
- The ability to present the product aseptically with a fibre free peel
- Improved puncture resistance with the use of stronger paper than Westfield's standard products
- All indicators and text prints are within the seals avoiding the risk of ink contamination onto the device.

These reels are produced in a class 8 cleanroom and are manufactured under ISO 9001/ISO 13485 Quality System, CE and BSI Kite Mark.

Tyvek® Reels and Pouches

H₂O₂ Sterilization

- Manufactured under BS EN ISO 9001 and BS EN ISO 13485
- H₂O₂ Indicator complies with the requirements of ISO 11140-1
- Suitable for plasma, ETO, Formaldehyde and Gamma sterilization
- Printed with Class 1 process indicators compliant with ISO 11140-1
- Pouches and reels conform to BS EN ISO 11607-1 part 1 and BS EN 868-5 & 9
- Sealed to polyester/polyethylene laminate providing excellent strength and peelability
- Manufactured from Tyvek® protective material 1073B, offering a high level of barrier protection
- Indicators change from red to yellow when exposed to Hydrogen Peroxide signalling the pack has been processed

Sterilization Paper Bags

Heat seal, plain closure and used instrument bags

- Serrated top to prevent skin cuts
- Conforms to ISO 11607-1 and BS EN 868-4
- Designed with a stepped top for easy filling
- Manufactured from medical grade paper, adhesive and inks
- Manufactured under ISO 9001 and ISO 13485 quality system
- Printed with Class 1 process indicators compliant with ISO 11140-1
- Customised prints including ETO and steam indicators are available
- Available with a heat seal band and steam indicator or plain top without indicators

Instrument Identification Tape Rolls

Tape Application Instructions

- 1) Soak brush in a disinfectant solution
- 2) Wipe tape-site with alcohol to remove any lubricant
- 3) Tape should be wrapped only 1 to 1 1/2 times around and applied with firm tension.
- 4) After tape is applied, sterilize instruments. The heat will assist with the bonding of the tape.
- 5) Tape the shanks of instruments, avoiding instrument rings. Wrapping tape 1 to 1 1/2 times around will not interfere with the closing of most scissor tips.

AVAILABLE WIDTHS

Quickly identifies instruments by department or procedure

Easy to apply

Withstands repeated exposure to sterilization

Has more per tape roll (300" / 7620 mm)

Available in 9 colors and 2 widths

Conveniently packaged in a clear box

Non-Sterile

Instrument Identification Sheet Tape

Our Simple Tracking Identification Color System, or S.T.I.C.S., is an easy to use, latex free, tool that allows you to quickly identify your instruments by department and/or procedure. The tape adheres securely and every tape sheet comes with a protective cover to ensure it lasts as long as you need.

Each 8.5" x 11" (216 mm x 279 mm) sheet contains the following adhesive strips:

- 1" (25.4 mm) x 220
- 1.5" (38.1 mm) x 44
- 2" (50.8 mm) x 44
- Total tape per sheet 374" (9500 mm)

Osteotome and Instrument Guards

Our Instrument Protectors protect the tips and edges of instruments to prevent damage during handling and sterilization. Available in a wide array of color coded sizes for almost every application, including osteotome, retractor, double, and perforated.

- Steam and gas permeable
- Perforated protectors reduce vacuum seal and moisture build-up
- Validated for pre-vacuum sterilization
- Multiple color-coded sizes
- Latex Free
- Non-Sterile

Protect Endoscope Tips and Lenses During Transport and Storage

- Allows moisture to escape, eliminating potential bacteria growth that can occur with most foam or solid protectors
- Semirigid expandable mesh protects the tip/lens of the endoscope from front and side impact
- Ideal for protecting sensitive surgical instruments
- Nonabrasive design won't scratch any part of the scope or lens

PADLOCKS SECURITY TAGS

Our Padlock Security Tags for instrument containers and general hospital applications are specifically designed for the healthcare market. Our material selection, fabrication process, and engineering ensure consistent quality and high temperature compliance with the various steam sterilization temperatures in worldwide hospital applications.

Available with optional reactive ink indicator dots that provide visual sterility indication. Light blue dots turn brown/dark brown when steam sterilized.

AVAILABLE IN THREE FORMATS

700-SERIES

800-SERIES

900-SERIES

Made of polypropylene

Latex and DEHP Free

Will not melt or soften with any established steam sterilization protocol

Fully open design (45°) facilitates insertion into instrument containers

Easy twist breaking design

Large base for easier handling

Available in different size

Custom Colors and OEM available upon request

PRINTED & CUSTOM NUMBERED PADLOCKS

Available in 700, 800 & 900 SERIES

Stainless Steel Pin Sterilization Tube

Order #	Description
SMI1/ST SK	Sterilization replacement tube and cap Sterilization Tube
SMI1/STERTUBE-25	

Stainless Steel Pin Sterilization Tube

- Durable design 304 Stainless Steel
- Durable Electro Polish
- Silicone Caps both ends
- Overall length with caps in place 26"
- Overall length without caps 25"
- Holds pins up to 24" long
- Inside diameter 0.625"

Kirwan Sterilization Trays

- Sterilization Trays from Kirwan Surgical Products hold six, twelve and two bipolar bayonet forceps
- Proper positioning and better handling of the instruments ensure that they will last longer and require less maintenance
- Constructed with anodized aluminum and are laser engraved
- Trays have two stainless steel locks that fasten the cover securely in place.
- Inside, the trays have unique silicone inserts that properly position the instruments.
- Silicone inserts and stainless steel locks are replaceable.
- These instrument trays are now offered with silicone corner inserts. The silicone corner inserts are also sold by the set. Reference product code #10-9097

Three-Quarter Size Containers

SteriTite[®] containers are sized to accommodate loaner sets

Southmedic Inc. is proud to present Case Medical

Drop-in Convenience: DIN-sized SteriTite[®] containers eliminate the need to wrap custom graphic (loaner) trays. This saves time and reduces the risks, delays and costs associated with reprocessing punctured wrapped trays. Additional benefits include the ability to stack trays and process in steam as well as STERRAD[®] and other low temperature sterilizers. Use with corresponding baskets.

Long & Wide Containers

D-ring handles enable aseptic lid removal for enhanced safety

Safer Design: SteriTite® containers and components are constructed of anodized aluminum, platinum-cured silicone, and passivated stainless steel hardware, making them less susceptible to performance issues that can result in improperly processed devices and OR delays. Use with corresponding baskets.

FlashTite® Containers and Baskets

FlashTite® valve plates for drier IUSS processing

Rapid Sterilization: FlashTite® filterless valve plates are a faster drying bacterial barrier alternative to our disposable filter systems making them ideal for Immediate Use Steam Sterilization (IUSS). FlashTite® filterless valve plates are FDA cleared for both pre-vac and gravity steam sterilization. Use the corresponding basket to secure the contents.

Endoscopy Tray Sets

Secure endoscopy instrument sets

Secure Instruments with “L” shaped handles: The MediTray® Endo Tray System is designed for devices like graspers, kerrisons, and forceps. An interior bridge with scalloped, silicone brackets holds multiple instruments securely in place. This creates a more efficient use of space, maximizes exposure to sterilants, and promotes fast drying. The base tray is used to secure scopes, cameras, and other accessories. An insert tray (included) houses trocars, cannulas, and light cables.

Half Size Endo Insert Trays

16.1”x9.7”x7”
(40.9x24.6x17.8 cm)

Filters & Single Use Kits

SteriTite® containers utilize single use filters

Protective Barriers: SteriTite® sealed containers require single use filters to create a bacterial barrier, Use paper filters for rapid processing for terminal steam sterilization. Polypropylene filters are universal and required for H2O2 sterilization including use in STERRAD®, V-Pro®, Sterizone® and other hydrogen peroxide systems. Order a kit of filters, seals, and load cards and have everything you need for sterilization of SteriTite® and other DIN-size containers, Square filters (9"x9") are also available.

Closed Case Carts

Stainless steel components for enduring quality

Secure Transportation & Storage: The SteriTite® Case Cart system provides a safe and convenient way to transport and store surgical devices and supplies. Enhanced features include durable stainless steel construction, efficient use of space, adjustable perforated shelves, shock absorbing wheels with stainless steel casters, and a 2D bar code for tracking. Available in various sizes to meet the needs of the surgical specialty. Case carts with suffix D1 are extra deep and wide. Add a disposition monitor to identify clean from soiled (used) loads.

BR111400	Mesh Small Parts Basket • 6.75L x 2.125" (5.4cm) dia	1ea

NEW

Keep Track of Small Instruments during Sterilization

- Stainless steel construction
- Dimensions 6.75" x 2.125"

Peach Clip

Heavy-duty clamp is designed to secure drapes to drape stands and IV poles and can be used for a variety of clamping needs.

Multi-Purpose Surgical Drape Clamp

The easy-to-grip clip allows for secure clamping of surgical drapes to IV poles and drape-stands. The clip is washable, reusable, and rust-resistant. Available in 4 different colors, the clamps are easy to identify and conveniently packaged in a budget-saving package of 8 clips (two of each color; blue, pink, green, and purple).

- Assorted colors
- Nonsterile
- Washable clips won't rust
- Clip dimensions: 2.75"L x 1.875"W

Cleaning and Sterilization Recommendations for Silicone Tubing

WARNINGS	Do not exceed 135° C.
Limitations on Reprocessing:	Repeated processing has an effect on the tubing. End of life is normally determined by wear and damage due to use.
INSTRUCTIONS	
Point of Use:	For best results and to prolong the life of the tubing, reprocess immediately after use. Remove excess soil with disposable cloth/paper wipe.
Containment & Transportation:	No particular requirements. It is recommended that tubing is reprocessed as soon as is reasonably practical following use.
Cleaning: Manual	Mild detergent with neutral pH (7), brush and running water. Method: 1. Rinse excess soil from tubing. 2. Apply detergent solution to all surfaces. 3. Rinse under clean running water. Standard protocols defined by the institution should be used for cleaning and disinfection.
Disinfection:	Disinfectant solution may be used in accordance with label instructions.
Drying:	Tubing should be thoroughly dried with a clean, soft cloth prior to sterilization.
Maintenance:	Discard damaged tubing.
Inspection and Function Testing:	Visually inspect for damage and wear.
Packaging:	N/A
Sterilization:	Vacuum autoclave, minimum of 4 minutes at 132° C. Gravity autoclave, minimum of 10 minutes at 132° C. Do not exceed 135° C.
Storage:	No particular requirements.

Per EN ISO 17664:2004 (E); the instructions above have been provided by the medical device manufacturer as being CAPABLE of preparing a medical device for re-use. It remains the responsibility of the processor to ensure that the processing as actually performed using equipment, materials and personnel in the processing facility achieve the desired result. This requires validation and routine monitoring of the process. Likewise any deviation by the processor from the instructions provided should be properly evaluated for effectiveness and potential adverse consequences.

Surgical Instrument Sharpness Test Standards Kit

Verification and Testing

We are pleased to offer the perfect kit for testing surgical instruments for proper sharpness. The Sharpness Test Standards Kit includes easy-to-understand instructions, all sharpness testing materials, and full-color photographs illustrating everything you need to know about testing:

Affordable. Trusted. Preferred.

Scissor Testing Material and Holder

ORDER#	DESCRIPTION	UOM
BR39975	Yellow - Thin - 5"W	1ea
BR39976	Red - Medium - 5"W	1ea
BR39973	Yellow Latex - Thin - 5"W	1ea
BR39974	Red Latex - Medium - 5"W	1ea
BR42405	Scissor Testing Material Holder	1ea

- Scissors
- Curettes
- Kerrison Rongeurs
- Osteotomes
- Chisels
- Pin Cutters
- Bone Cutters
- Pituitary Rongeurs
- Arthroscopy Punches
- Laparoscopic Scissors
- Double Action Rongeurs
- Biopsy Punches and more!

Test your scissors for proper sharpness

1 Using right hand thumb and middle (or ring) finger, make sure that scissors are held like a surgeon.

2 Cut through material using 1/2 of blade to cut through to the distal tip.

3 After several cuts, extract scissors. If scissors do not pinch or grab material, scissors are sharp.

4 The final test is how the scissors feel. Scissors should open and close smoothly, and should not "jump," grind, or feel loose.

Wash Monitors

Disposable Washer Monitor

Check the effectiveness of your washer/detergent system with a consistent monitor on a routine basis

- When cleaning conditions are effective, the test soil (red dot) on the monitor strip is dissolved.
- If insufficient time, temperature, detergent concentration, spray arms function or enzyme soak occurs, a red residue remains.

Test soil is designed to parallel the removal of blood and tissue from surgical instruments

- No actual blood components from any source are contained in the test soil.

Low-cost monitor promotes routine use

- We recommend monitoring every shelf of every washer each day for a machine release and using a minimum of one Wash-Checks™ strip per load when the washer has proven effective.

SAVE MONEY by using the same holder for your Wash-Checks™

- Simply insert monitor into holder and place in basket.

All monitors show lot number and expiration date

- 2-year shelf life.

Order # 98-0101 Monitors (100 per bag – 9 bags per case)
Order # 98-0102 Holders (6 per case)

Disposable Ultrasonic Cleaning Monitor

Check the effectiveness of your ultrasonic cleaner with a consistent monitor on a routine basis

- When cleaning conditions are effective, the test soil (blue box) on the monitor strip is dissolved.
- The presence of a large amount of blue test soil remaining on the monitor indicates deficient ultrasonic cleaning.

Low-cost monitor promotes routine use

- We recommend monitoring the ultrasonic cleaner once daily with an empty load for a machine release and periodically throughout the day with instruments for a load release.

Use with Wash-Checks™ U Holder

- We recommend monitoring every shelf of every washer each day for a machine release and using a minimum of one Wash-Checks™

Order # 98-0108 Monitors (50 per bag – 5 bags per case)
Order # 98-0102 Holders (6 per case)

Verification and Testing

Wash-Checks™ is a registered trademark of SteriTec Products, Inc.

Wash Monitors

Verification and Testing

WASH-CHECKS™ Washer Monitor for Lumened Instruments

Check the effectiveness of your washer/detergent system for lumened instruments

- Place small Wash-Checks™ H indicator in hollow holder (H Holder) device
- Connect device to lumen port on washer and proceed to wash as a lumened instrument.
- Disconnect hollow holder and examine Wash-Checks™ H

Low-cost monitor promotes routine use

- Monitor at least twice daily.

Test soil is designed to parallel the removal of blood and tissue

- No blood components are contained in the test soil.

Use with your choice of Wash-Checks™ holder:

- H Holder (pictured at right)
- E Holder (pictured at lower right)

Order # 98-5010 Monitors (25 per vial – 4 vials per box)
 Order # 98-6010 H Holder (1 each)
 Order # 98-7010 E Holder (1 each)

TempaChek™

Visualize the Temperature with TempaChek™

Water temperature is key to cleaning performance. In general, the warmer the water, the more effective the cleaning action. However, with each method and at each stage of cleaning, it is important that the water not exceed a certain temperature.

When using an Automated Instrument Washer, the initial rinse water should not exceed 45°C (113°F) and it is suggested temperatures remain significantly below this level. At 45°C, blood is cooked onto instruments and becomes highly insolvent - making removal very difficult. Temp-90 is a simple method for verifying and documenting the temperature. Water temperature is also the key source of thermal disinfection.

TempaChek-170 provides a permanent and independent measure of the surface temperature achieved during this critical phase of the process.

The TEMP-HL is an irreversible, disposable thermometer that has the ability to indicate both high and low temperatures to ensure that reprocessed items stay within a desired temperature range during transportation of goods. When the temperature gets to 0°C, a distinct clear to red color change occurs. Conversely, when the temperature exceeds 29°C, the color changes from white to black.

The Healthmark Watermark™

Verification and Testing

Find the Right Level With The Healthmark Watermark™

The Healthmark Watermark™ is a bumper sticker sized liquid crystal thermometer with a “water fill line” that adheres to the inside of a manual or ultrasonic bath. Following the instructions of your detergent manufacturer, determine the appropriate water level for the bath. In the white space, record the volume of water. Staff should then be instructed as to the amount of detergent to add to the bath, in accordance with the detergent manufacturer’s IFU. Unique to the Healthmark Watermark™ is an easy to read liquid crystal thermometer located below the fill line. By monitoring the temperature (70°-150°F), staff can be sure the solution is in the proper range as directed by the detergent manufacturer’s IFU. Measures 12”w x 3”h.

The TEMPACHEK-LC is a liquid crystal thermometer that can be mounted to the side of the bath, below the water line. This inexpensive and reusable thermometer will display the real time temperature of the bath, providing valuable feedback about the appropriateness of the bath temperature when compared to the temperature recommended by the detergent manufacturer.

Order # TEMP-WMK

CartWashCheck™

Mark the Cleaning Reach of your Cart Washer with CartWashCheck™

Cart washers are important tools in the overall effort to reduce cross contamination. Often they are used to clean not just surgical case carts, but also basins, instrument trays, wheel chairs and other supply and patient transport equipment.

The CartWashCheck™ is designed to challenge the mechanical efficiency of the cart washer. These convenient tests can be quickly and easily adhered to any metal surface with the peel off adhesive back. Place these tests on surfaces that are furthest from the washer jets or in areas where coverage is the most difficult. The dark blue square should wash, leaving a white square. This demonstrates that water is reaching the area tested and indicates proper mechanical action. Further, the test reports common maximum temperature levels cart washers are programmed to reach: 120°F, 150°F & 180°F. The irreversible thermometer reports the highest temperature reached during the cycle.

Order # CW-101

LumCheck™ and FlexiCheck™

Verification and Testing

Observe the Inside-Out with LumCheck™ and FlexiCheck™

LumCheck™ is the first test designed as an independent check on the cleaning performance of rigid scope cleaners. The LumCheck™ is made up of three key components: The test soil, the stainless steel plate and the LumCheck™ holder. The soil is composed of blood components mixed and applied in a precise manufacturing process. As a result, it provides a consistent challenge to the cleaning effectiveness of the MIS cleaning device. The stainless steel plate is “scratched,” replicating the uneven interior of lumen instruments. The holder enables the attachment of the test to the cleaning equipment and also replicates the cleaning challenge of cannulated instruments. After running the LumCheck™ test through a cleaning cycle, remove the test from the holder. Examine the stainless steel plate for the presence of soil. The LumCheck™ should be visually clean. LumCheck™ complies with ASTM Guide D7225.

The FlexiCheck™ is a three part kit that simulates a flexible endoscope channel and is designed to challenge the cleaning efficiency of endoscope washers. The kit includes a flexible tube, attached to a stainless steel lumen device. The test coupon is placed in the lumen and the entire device is hooked up to the irrigation port of the washer. The test coupon includes two soils, components of blood soil and polysaccharide soil. These soils are the types which are often found within the channels of flexible endoscopes and represent a significant cleaning challenge. When processed through a cleaning cycle, the endoscope washer should completely remove both soils from the test coupon.

Order # FLEXCHK-102

TOSI™ Instrument Washer Test

Reveal the Hidden Areas of Surgical Instruments with the TOSI™ Instrument Washer Test

Reveal the hidden areas of instruments with the TOSI™ washer test, the easy to use blood soil device that directly correlates to the cleaning challenge of surgical instruments. TOSI™ is the first and only device to provide a consistent, repeatable, and reliable method for evaluating the cleaning effectiveness of the automated instrument washer.

This is possible, because the blood soil is manufactured to exacting specifications each and every time. When metered on to the stainless steel plate, the TOSI™ is completely analogous to a stainless steel instrument soiled with dried blood. Placed in the see-through plastic holder, the challenge is identical to the areas of instruments typically hidden from view (i.e., box locks).

The routine use of this test will help ensure that your instrument washer is performing at a consistent level, enhancing the routine visual inspection of instruments. TOSI™ complies with new AAMI and AORN Guidelines as well as ASTM Guide D7225.

SonoCheck™

Verification and Testing

Make the Invisible, Visible with SonoCheck™

It is invisible to the human eye, but with the SonoCheck™ you can test for the presence of cavitation energy - the cleaning power - of your ultrasonic cleaner.

Ultrasonic cleaning is a result of sound waves introduced into a cleaning liquid by a series of transducers. The sound travels throughout the tank and creates waves of compression and expansion. During the expansion wave, molecules of the liquid are pulled dramatically, ripping them apart. This creates microscopic vacuum cavities. As the pressure around these cavities becomes greater, they collapse violently, forming voids

- a process called cavitation. This creates extreme temperature and combines with the velocity of the liquid jet to deliver a very intense cleaning action in a minute area.

When the ultrasonic cleaner is supplying sufficient energy and conditions are correct, SonoCheck™ will change color. Problems such as insufficient energy, overloading, water level, improper temperature and degassing will increase the time needed for the color change. In the case of major problems the SonoCheck™ will not change color at all.

Order # TI 108

ChannelCheck™

Identify the Presence of Residual Organic Soils with ChannelCheck™

ChannelCheck™ is the first product capable of testing virtually any lumened instrument for residual organic soils, no matter the channel size.

ChannelCheck™ tests for three common organic soils at once: blood, protein and carbohydrates.

Simply flush an individual channel with commercially available, pre-packaged sterile water (i.e. sterile water for irrigation) and recover that water in a clean (preferably sterile) container. Then dip and swish the test strip in the recovered water for 10 seconds. Remove the strip, wait 90 seconds and then compare the color of the pads to the results chart. Should any of the pads indicate there is residual soil, re-clean the device and then re-test.

Order # UCC-101

MM513 Insulation Defect Tester with Rechargeable Battery

Verification and Testing

McGan Technology's MM513

Electrosurgical insulation defect detector is a compact, hand held, battery operated unit that is used to detect and locate defects such as pinholes, cracks and bare spots in protective coatings applied over conductive instrument's surfaces.

Application:

Insulation defect testing of electrosurgical instruments and cables

- Laparoscopic
- Endoscopic
- Intra-operative instruments
- Monopolar and bipolar surgical devices

Checks both disposable and reusable instruments

Features:

- LED voltage indicator
- Voltage control up and down buttons
- Visual and audible alarm indicator
- On Switch
- Off Switch
- Adjustable from 0 to 5 kV
- Ground wire with alligator clip
- Rechargeable Lithium battery
- Battery pack and charging adaptor (optional)
- Light weight portable unit
- Reusable / Interchangeable Brush or Ring electrode
- Simple operation, easy to read LED indicators
- Maintains applied test voltage with constant current source
- Full test current at low voltages.
- Limited Output current for operator safety
- LED displays alarm and battery charge

Examples of the test set-up are shown below:

Device Specifications:

- Weight: 305g (0.672 lbs.)
- Display: LCD
- Voltage: 0 to 5kV adjustable
- Resolution: 10V
- Current Output: < 0.1mA at probe
- Short Circuit: Test current 170mA @3kV
- Power Supply: 3.6v LiPo (Lithium polymer battery)
- Dimensions: 215x 78 x 38mm

The History of Southmedic

Established in 1983, Southmedic is a privately owned corporation to provide innovative healthcare products that improve the quality of care with better patient outcomes. Our dynamic Canadian Distribution Division has grown to be one of the largest independent distributors of specialty products focusing on technical support and knowledge that is essential to providing a better healthcare experience.

Mission Statement

As a leading medical device manufacturer and distributor, these are our core goals and values:

Core Goals

- Drive sales growth objectives
- Invest in our People
- Plan for the future
- Improve operations/reduce cost

Core Values

- We value the skills strengths and perspectives of our diverse team
- We value our open-minded culture
- We value respect, accountability, and integrity
- We value loyalty and commitment

We believe in Finding a Better Way!

We do this by:

- Employing and providing fulfilling careers to passionate people who care about improving patient care
- Offering products that our customers can trust and depend on
- Maintaining a global company footprint with a small company feel, to remain fast and agile
- Challenging traditional thinking by providing innovative solutions to improving healthcare
- Operating in a way that is extraordinarily customer focused
- Delivering quality products and services through continuous improvement, education and dedicated focus
- Consistently going above and beyond to demonstrate to our customers that we truly care
- And always doing the right thing
